-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 28 July 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/28/05 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5, 9-12, and 14-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Yuan et al. (6,069,417).

Regarding claim 1, Yuan et al. shows a positioning apparatus (Figures 2 and 5) comprising:

- A movable member (30) movable in a first direction (Y) and
- An electromagnet unit (40, 50) configured and positioned to drive said movable member in the first direction. wherein said electromagnet unit comprises:

- A first electromagnet (42); and
- A second electromagnet (52) positioned away from said first electromagnet in a second direction (X) which is perpendicular to the first direction,
- Wherein each of said first electromagnet and said second electromagnet is controlled to generate a magnetic flux having an inverted polarity with respect to the other (F1 vs. F2).

Regarding claims 2-5 and 9-11, it is noted that Yuan et al. also shows all of the limitations of the claimed invention including the current control means (16), supporting member (119), a third electromagnet (Figure 5).

Regarding claim 12, the method would be inherent and obvious since the prior art references meet the structural limitations of the claimed device.

Regarding claims 14-16, it is noted that Yuan et al. also shows all of the limitations of the claimed invention in Figure 5.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yuan et al.

Regarding claim 6, Yuan et al. shows all of the limitations of the claimed invention except for the ratio 1:2:1.

Art Unit: 2834

It would have been obvious to one having ordinary skill in the art at the time the invention was made to apply the current at a ratio of 1:2:1, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art.
